1 PART NUMBER DESCRIPTION FOR AVAILABLE OPTIONS

LMR 0234 203- 466 7

① BACKLIGHT TYPE

3 = Module without Backlight or with EL Backlight

4 = Module with LED Backlight

6 = Module with CCFL Backlight

2 POLARIZER TYPE

B = Transflective: light background E = Transmissive: dark background

3 BACKLIGHT COLOR

G = Yellow-Green (Standard)

W = White LED

None if CCFL Backlight

4 FLUID TYPE AND POWER SUPPLY

D = Standard temperature range with external negative voltage operation

S = Standard temperature range with on-board negative voltage generation

H = Wide temperature range with external negative voltage operation

W = Wide temperature range with on-board negative voltage generator

S TEMPERATURE COMPENSATION CIRCUIT

N = Without on board temperature compensation circuit

C = With on board temperature compensation circuit

© COLOR FOR STN FLUID

B = STN Blue background (available for E polarizer type only)

G = STN Blue Pixels on Gray background for B polarizer types only

Y = STN Blue Pixels on Yellow background for B polarizer types only

F = FSTN Black Pixels or background depending on B or E polarizer type

(2) ADDITIONNAL OPTIONS

12 = it is mentioned if top view angle is needed

HL = High Luminosity for White LED Backlight if avaible

"LMR" AT THE BEGINNING OF THE PART NUMBER IS REPLACED BY "TSR" IF THE MODULE HAS A TOUCH PANNEL

Page 4 / 51

2 MAIN FEATURES

| ITEM | CONTENTS |
|-----------------------|--|
| Display Format | 240 * 128 dos |
| Overall Dimensions | 144.0×104.0×14.3(MAX)mm |
| Viewing Area | 114.0×64.0mm |
| LCD type | STN / FSTN |
| Mode | Available in Reflective / Transflective / Transmissive |
| Viewing Angle | 6 and 12 o'clock |
| Duty ratio | 1/128 |
| Driver IC | T6963C |
| Backlight type | None / LED / CCFL |
| Backlight colour | Yellow Green / White / Amber |
| DC/DC converter | None or Included |
| Operating temperature | From 0/+50°C to -20°/+70°C |
| Storage temperature | From -20°/+70°C to -30°/+80°C |

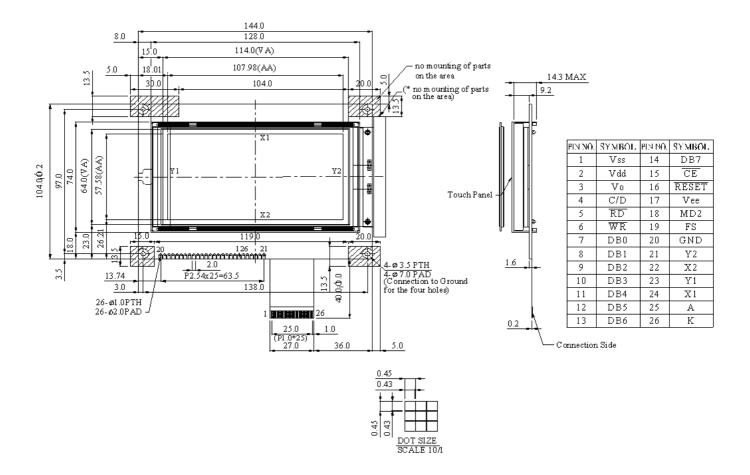

3 MECHANICAL SPECIFICATION

3.1 MECHANICAL CHARACTERISTICS

| ITEM | CHARACTERISTIC | UNIT |

4.6 DISPLAY CONTROL INSTRUCTION

The LCD Module has built in a T6963C LSI controller, It has an 8-bit parallel data bus and control lines for writing or reading through an MPU interface, it has a 128-word character generator ROM (refer to Table 1.), which can control an external display RAM of up to 8K bytes. Allocation of text, graphics and external character generator RAM can be made easily and the display window can be moved freely within the allocated memory range.

•RAM Interface

The external RAM is used to store display data(text, graphic and external CG data). It can be freely allocated to the memory area (8 Kbyte max).

Recommend

□Flowchart of communications with MPU

(1)Status Read

| Page | 12 / 51 |
|------|---------|
|------|---------|

A status check must be performed before data is read or written.

Status check

The Status of T6963C can be read from the data lines.

 $\begin{array}{ccc} \overline{RD} & L \\ \overline{WR} & H \\ \overline{CE} & L \\ C/D & H \\ Do to D7 & H \end{array}$

The T6963C status word format is as follows:

MSB

| | | | | | | LSB | |
|------|------|------|------|------|------|------|------|
| STA7 | STA6 | STA5 | STA4 | STA3 | STA2 | STA1 | STA0 |
| D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |

| STA0 | Check command execution capability | 0:Disable |
|--|--|------------------|
| 21110 | encon communication capacitation | 1:Enable |
| STA1 | Check data read/write Capability | 0:Disable |
| 51711 | Check data read/write Capability | 1:Enable |
| STA2 | Check Auto mode data read capability | 0:Disable |
| SIAZ | Check Auto mode data read capability | 1:Enable |
| STA3 Check Auto mode data write capability | | 0:Disable |
| SIAS | Check Auto mode data write capability | 1:Enable |
| STA4 | Not used | |
| STA5 | Charle controller energtion conshility | 0:Disable |
| SIAS | Check controller operation capability | 1:Enable |
| STA6 | Error flag. Used for Screen Peek and Screen copy | 0:No error |
| SIAU | commands. | 1:Error |
| CTA 7 | Ch 1- 4h - 1-1: - 1 1/4: | 0:Disable off |
| STA7 | Check the blink condition | 1:Normal display |

(Note 1) It is necessary to check STA0 and STA1 at the same time.

There is a possibility of erroneous operation due to a hardware interrupt.

(Note 2) For most modes STA0/STA1 are used as a status check.

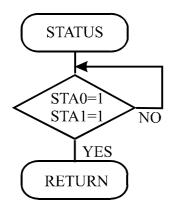

(Note 3) STA2 and STA3 are valid in Auto mode; STA0 and STA1 are invalid.

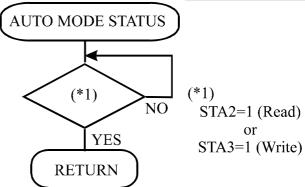

Status Checking flow

(a) (b)

| Page | 13 / 51 |
|------|---------|
|------|---------|

(Note 4) When using the MSB=0 command, a Status Read must be performed.

If a status check is not carried out, the T6963C cannot operate normally, even after a delay time.

The hardware interrupt occurs during the address calculation period (at the end of each line). If a MSB=0 command is sent to the T6963C during this period, the T6963C enters Wait status.

If a status check is not carried out in this state before the next command is sent, there is the possibility that the command or data date will not be received.

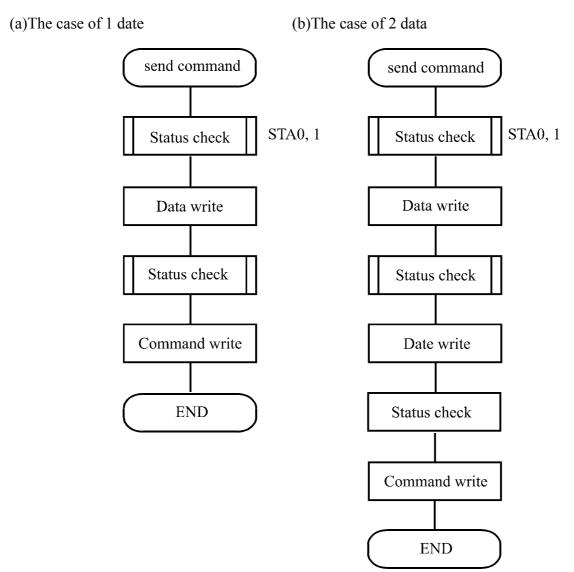

Page 14/51

(2)Setting date

When using the T6963C, first set the data, then set the command.

Procedure for sending a command

(Note) When sending more than two data, the last datum (or last two data)is valid.

| Page | 15 / 51 |
|------|---------|
|------|---------|

□ COMMAND DEFINITIONS

| COMMAND | CODE | D1 | D2 | FUNCTION |

X: invalid

☐ Setting registers

| CODE | HEX. | FUNCTION | D1 | D2 |
|----------|------|---------------------|----------|-----------|
| 00100001 | 21H | SET CURSOR POINTER | X ADRS | Y ADRS |
| 00100010 | 23H | SET OFFSET REGISTER | DATA | 00Н |
| 00100100 | 24H | SET ADDRESS POINTER | LOW ADRS | HIGH ADRS |

(1)Set Cursor Pointer

The position of the cursor is specified by X ADRS and Y ADRS. The cursor position can only be moved by this command. Data read/write from the MPU never changes the cursor pointer. X ADRS and Y ADRS are specified as follows.

X ADRS 00H to 4FH (lower 7 bits are valid)

Y ADRS 00H to 1FH (lower 5 bits are valid)

Single-Scan

X ADRS 00 to 4FH

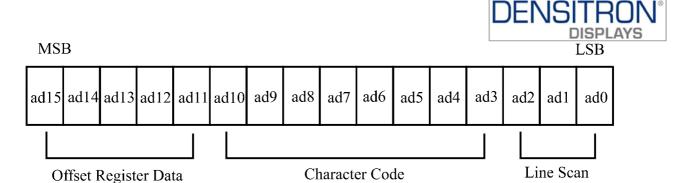

Y ADRS 00H to 0FH

(2)Set Offset Register

The offset register is used to determine the external character generator RAM area.

The T6963C has a 16-bit address bus as follows.

| Page | 17 / 51 |
|------|---------|
|------|---------|

T6963C assign External character generator, when character code set 80H TO FFH in using internal character generator. Character code 00H to 80H assign External character generator, when External generator mode.

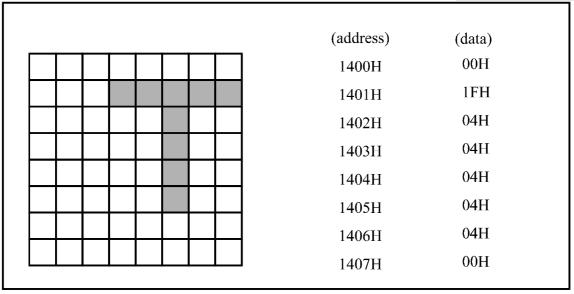

The senior five bits define the start address in external memory of the CG RAM area. The next eight bits represent the character code of the character. In internal CG ROM, character codes 00H to 7FH represent the predefined "internal" CG ROM characters, and codes 80H to FFH represent the user's own "external" characters. In external CG ROM mode, all 256 codes from 00H to FFH can be used to represent the user's own characters. The three least significant bits indicate one of the eight rows of eight dots that define the character's shape.

The relationship between display RAM address and offset register

| Offset register data | | | | | | CG RA | AM hex. address (start to end) |
|-------------------------|-------|-------|--------|---|---|---------|--------------------------------|
| 00000 | | | | | | 0000 to | o 07 FFH |
| 00001 | | | | | | 0800 to | o 0FFFH |
| 00010 | | | | | | 1000 to | o 17FFH |
| | | | | | | | |
| 11100 | | | | | | E000 to | o E7FFH |
| 11101 | | | | | | E800 t | o EFFFH |
| 11110 | | | | | | F000 to | o F7FFH |
| 11111 | | | | | | F800 to | o FFFFH |
| (Example 1) | | | | | | | |
| Offset register | | | | | | 02H | |
| Character code | | | | | | | 80H |
| Character generator RAI | M sta | rt ad | ldress | S | | | 0001 0100 0000 0000 |
| | 1 | 4 | 0 | 0 | Н | | |

| Page | 18 / 51 |
|------|---------|
|------|---------|

(Example 2) The relationship between display RAM data and display characters

| | (RAM DATA) | (Character) |
|--------------------------------|------------|-------------|
| AB γ DE ζ GHIJKLM | 21H | A |
| | 22Н | В |
| | 83H | γ |
| | 24H | D |
| | 25H | E |
| | 86H | ζ |
| Display character | | |

 γ and ζ are displayed by character generator RAM.

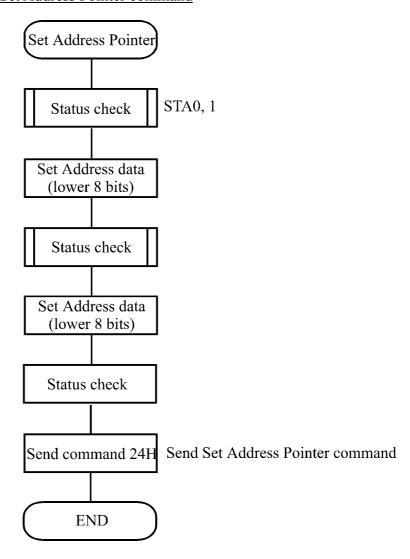

(3)Set Address Pointer

The Set Address Pointer command is used to indicate the start address for writing to (or reading from) external RAM.

| Page | 19 / 51 |
|------|---------|
|------|---------|

The Flowchart for Set Address Pointer command

☐ Set Control Word

| CODE | HEX. | FUNCTION | D1 | D2 |
|----------|------|--------------------------|-------------|--------------|
| 01000000 | 40H | Set Text Home Address | Low address | High address |
| 01000001 | 41H | Set Text Area | Columns | 00H |
| 01000010 | 42H | Set Graphic Home Address | Low address | High address |
| 01000011 | 43H | Set Graphic Area | Columns | 00H |

The home address and column size are defined by this command.

(1)Set Text Home Address

The starting address in the external display RAM for text display is defined by this command.

The text home address indicates the leftmost and uppermost position.

The relationship between external display RAM address and display position

| ТН | TH+CL |
|-------------|---------------|
| TH+TA | TH+TA+CL |
| (TH+TA)+TA | TH+2TA+CL |
| (TH+2TA)+TA | TH+3TA+CL |
| | |
| TH+(n-1)TA | TH+(n-1)TA+CL |

TH: Text home address

TA: Text area number (columns)

CL: Columns are fixed by hardware (pin-programmable).

(Example)

Text home address : 0000H
Text area : 0020H

: 32 Columns

: 4 Lines

| 0000Н | 0001H | 001EH | 001FH |
|-------|-------|-------|-------|
| 0020Н | 0021H | 003EH | 002FH |
| 0040H | 0041H | 005EH | 005FH |
| 0060Н | 0061H | 007EH | 007FH |

| Page | 21 / 51 |
|------|---------|
|------|---------|

(2)Set Graphic Home Address

The starting address of the external display RAM used for graphic display is defined by this command.

The graphic home address indicates the leftmost and uppermost position.

The relationship between external display RAM address and display position

| GH | GH+GL |
|-------------|---------------|
| GH+GA | GH+GA+CL |
| (GH+GA)+GA | GH+2GA+CL |
| (GH+2GA)+GA | GH+3GA+CL |
| | |
| GH+(n-1)GA | GH+(n-1)GA+CL |

GH: Graphic home address

GA: Graphic area number (columns)

CL: Columns are fixed by hardware (pin-programmable).

(Example)

Graphic home address : 0000H

Graphic area : 0020H

: 32 Columns

: 2 Lines

| 0000Н | 0001Н | 001EH | 001FH |
|-------|-------|-------|-------|
| 0020H | 0021H | 003EH | 003FH |
| 0040H | 0041H | 005EH | 005FH |
| 0060Н | 0061H | 007EH | 007FH |
| 0080Н | 0081H | 009EH | 009FH |
| 00A0H | 00A1H | 00BEH | 00BFH |
| 00C0H | 00C1H | 00DEH | 00DFH |
| 00E0H | 00E1H | 00FEH | 00FFH |
| 0100H | 0101H | 011EH | 011FH |
| 0120H | 0121H | 013EH | 013FH |
| 0140H | 0141H | 015EH | 014FH |
| 0160H | 0161H | 017EH | 017FH |
| 0180H | 0181H | 109EH | 019FH |
| 01A0H | 01A1H | 01BEH | 01BFH |
| 01C0H | 01C1H | 01DEH | 01DFH |
| 01E0H | 01E1H | 01FEH | 01FFH |

(3)Set Text Area

The display columns are defined by the hardware Setting. This command can be used to adjust the columns of the display.

(Example)

LCD size 20 columns, 4lines

Text home address 0000H

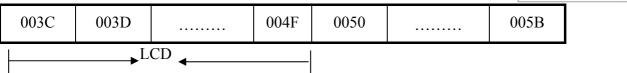

Text area 0014H

Set 32 columns, 4 Lines

| 0000 | 0001 | 0013 | 0014 | 001F |
|------|------|----------|------|----------|
| 0014 | 0015 | 0027 | 0028 | 0033 |
| 0028 | 0029 | 003B | 003C | 0047 |

| Page | 23 / 51 |
|------|---------|
|------|---------|

(4)Set Graphic Area

The display columns are defined by the hardware setting. This command can be used to adjust the columns of the graphic display.

(Example)

LCD size 20 columns, 2lines

Graphic home address : 0000H

Graphic are : 0014H

Set 32 columns, 2 Lines

| 0000 | 0001 | 0013 | 0014 | 001F |

| → LCD∢ | - | |
|--------|---|--|

If the graphic area setting is set to match the desired number of columns on the LCD, the addressing scheme will be automatically modified so that the start address of each line equals the end address of the previous line +1.

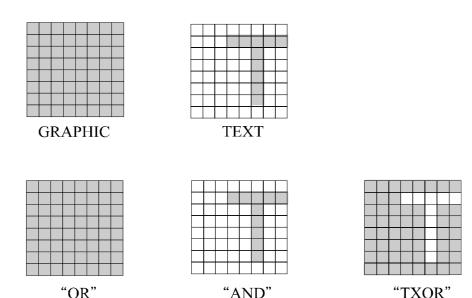

□ Mode set

| CODE | FUNCTION | OPERAND |
|----------|-----------------------------------|---------|
| 1000×000 | OR Mode | - |
| 1000×001 | EXOR Mode | - |
| 1000×011 | AND Mode | - |
| 1000×100 | TEXT ATTRIBUTE Mode | - |
| 10000××× | Internal Character Generator Mode | - |
| 10001××× | External Character Generator Mode | - |

X: invalid

The display mode is defined by this command. The display mode does not change until the next command is sent. The logical OR, EXOR, AND of text or graphic display can be displayed. In Internal Character Generator mode, character codes 00H to 7FH are assigned to the built-in character generator ROM. The character codes 80H to FFH are automatically assigned to the external character generator RAM.

(Example)

(Note)Attribute functions can only be applied to text display, since the attribute data is placed in the graphic RAM area

Attribute function

The attribute operations are Reverse display, Character blink and Inhibit. The attribute data is written into the graphic area which was defined by the Set Control Word command. Only text display is possible in Attribute Function mode; graphic display is automatically disabled. However, the Display Mode command must be used to turn both Text and Graphic on in order for the Attribute function to be available.

The attribute data for each character in the text area is written to the same address in the graphic area. The Attribute function is defined as follows.

Attribute RAM 1byte

| × | × | × | × | d3 | d2 | d1 | d0 | |
|---|---|---|---|----|----|----|----|--|
|---|---|---|---|----|----|----|----|--|

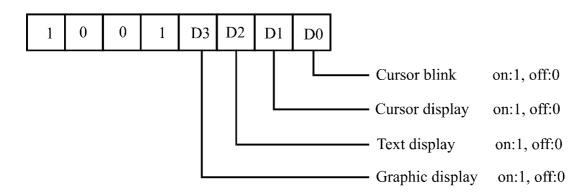

| d3 | d2 | d1 | d0 | FUNCTION |
|----|----|----|----|--------------------------|
| 0 | 0 | 0 | 0 | Normal display |
| 0 | 1 | 0 | 1 | Reverse display |
| 0 | 0 | 1 | 1 | Inhibit display |
| 1 | 0 | 0 | 0 | Blink of normal display |
| 1 | 1 | 0 | 1 | Blink of reverse display |
| 1 | 0 | 1 | 1 | Blink of inhibit display |

X: invalid

□Display mode

| CODE | FUNCTION | OPERAND |
|----------|----------------------|---------|
| 10010000 | Display off | - |
| 1001××10 | Cursor on, blink off | - |
| 1001××11 | Cursor on, blink on | - |
| 100101×× | Text on, graphic off | - |
| 100110×× | Text off, graphic on | - |
| 100111×× | Text on, graphic on | - |

X: invalid

(Note)It is necessary to turn on "Text display" and "Graphic display" in the following cases.

a)Combination of text/graphic display

b)Attribute function

□Cursor pattern select

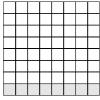

| CODE | TV D LOTTLON | OPER LIVE |
|------|--------------|-----------|
| CODE | FUNCTION | OPERAND |

| Page | 27 / 51 |
|------|---------|
|------|---------|

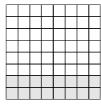

| 10100000 | 1-line cursor | - |
|----------|---------------|---|
| 10100001 | 2-line cursor | - |
| 10100010 | 3-line cursor | - |
| 10100011 | 4-line cursor | - |
| 10100100 | 5-line cursor | - |
| 10100101 | 6-line cursor | - |
| 10100110 | 7-line cursor | - |
| 10100111 | 8-line cursor | - |

When cursor display is ON, this command selects the cursor pattern in the range 1 line to 8 lines. The cursor address is defined by the Cursor Pointer Set command.

1-line cursor

2-line cursor

8-line cursor

□ Data Auto Read/Write

| CODE | HEX. | FUNCTION | OPERAND |
|----------|------|---------------------|---------|
| 10110000 | ВОН | Set Data Auto Write | - |
| 1011001 | В1Н | Set Data Auto Read | - |
| 10110010 | В2Н | Auto Reset | - |

The command is convenient for sending a full screen of data from the external display RAM. After setting Auto mode, a Data Write (or Read) command is need not be sent between each datum. A Data Auto Write (or Read) command must be sent after a Set Address Pointer command. After this command, the address pointer is automatically incremented by 1 after each datum. In Auto mode, the T6963C cannot accept any other commands.

The Auto Reset command must be sent to the T69963C after all data has been sent, to clear Auto mode.

| Page | 28 / 51 |
|------|---------|
|------|---------|

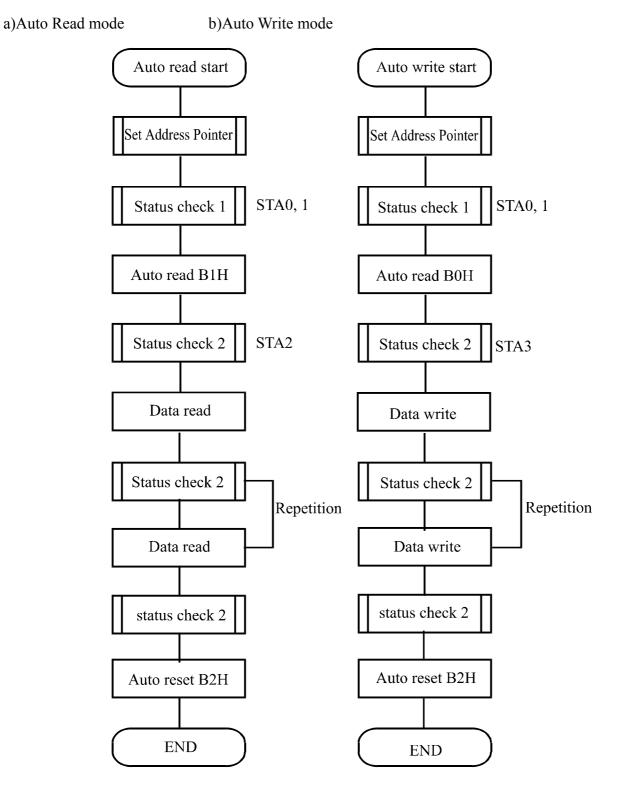

(Note)A Status check for Auto mode

(STA2, STA3 should be checked between sending of each datum. Auto Reset should be performed after checking STA3=1 (STA2=1.) Refer to the following flowchart.

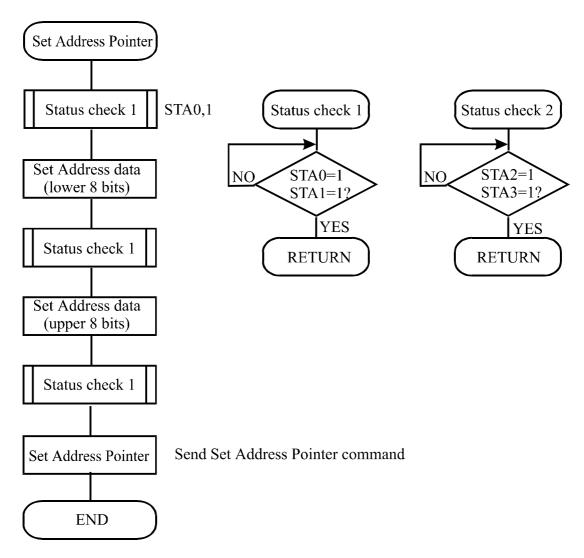

Page 29 / 51

Page 30 / 51

□ Date Read/Write

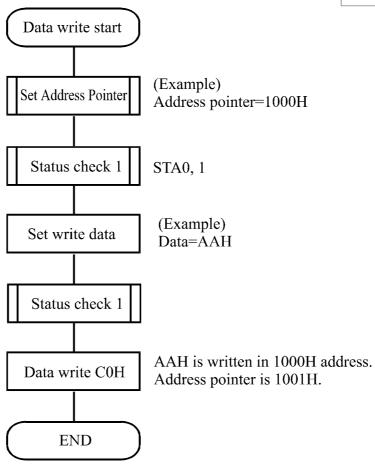

| CODE | HEX. | FUNCTION | OPERAND |
|----------|------|---------------------------------|---------|
| 11000000 | СОН | Data Write and Increment ADP | Data |
| 11000001 | C1H | Data Read and Increment ADP | - |
| 11000010 | С2Н | Data Write and Decrement ADP | Data |
| 11000011 | СЗН | Data Read and Decrement ADP | - |
| 11000100 | С4Н | Data Write and Non-variable ADP | Data |
| 11000101 | С5Н | Data Read and Non-variable ADP | - |

This command is used for writing data from the MPU to external display RAM, and reading data from external display RAM to the MPU. Data Write/Data Read should be executed after setting address using Set Address Pointer command. The address pointer can be automatically incremented or decremented using this command.

(Note)This command is necessary for each 1-byte datum.

Refer to the following flowchart.

□Screen Peek

| CODE | HEX. | FUNCTION | OPERAND |
|----------|------|-------------|---------|
| 11100000 | Е0Н | Screen Peek | - e |

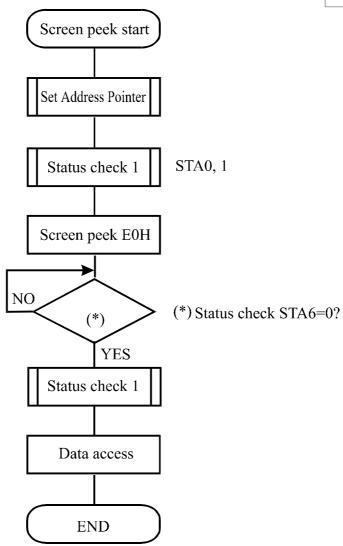

This command is used to transfer 1 byte of displayed data to the data stack; this byte can then be read from the MPU by data access. The logical combination of text and graphic display data on the LCD screen can be read by this command.

The status (STA6) should be checked just after the Screen Peek command. If the address determined by the Set Address Pointer command is not in the graphic area, this commands is ignored and a status flag (STA6) is set.

Refer to the following flowchart.

| Page | 33 / 51 |
|------|---------|
|------|---------|

□Screen Copy

| CODE | HEX. | FUNCTION | OPERAND |
|----------|------|-------------|---------|
| 11101000 | E8H | Screen Copy | - |

This command copies a single raster line of data to the graphic area.

The start point must be set using the Set Address Pointer command.

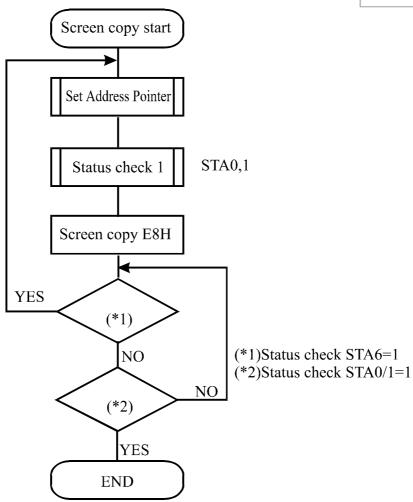

(Note 1) If the attribute function is being used, this command is not available.

(With Attribute data is graphic area data.)

Refer to the following flowchart.

| Page | 34 / 51 |
|------|---------|
|------|---------|

· Bit Set/Reset

| CODE | FUNCTION | OPERAND |
|----------|-------------|---------|
| 11110××× | Bit Reset | - |
| 11111××× | Bit Set | - |
| 1111×000 | Bit 0 (LSB) | - |
| 1111×001 | Bit 1 | - |
| 1111×010 | Bit 2 | - |

| Page | 35 / 51 |
|------|---------|
|------|---------|

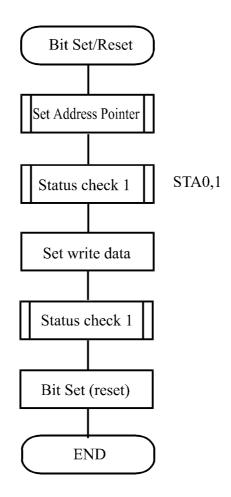

| 1111×011 | Bit 3 | - |
|----------|-------------|---|
| 1111×100 | Bit 4 | - |
| 1111×101 | Bit 5 | - |
| 1111×110 | Bit 6 | - |
| 1111×111 | Bit 7 (MSB) | - |

X: invalid

This command use to set or reset a bit of the byte specified by the address pointer.

Only one bit can be set/reset at a time.

Refer to the following flowchart.

8 QUALITY ASSURANCE SPECIFICATION

8.1 CONFORMITY

The performance, function and reliability of the shipped products conform to the Product Specification.

8.2 DELIVERY ASSURANCE

8.2.1 Delivery inspection standards.

- MIL-STD-105E, general inspection level II, single sampling level;
- IPC-AA610 rev. C, class 2 electronic assemblies standard

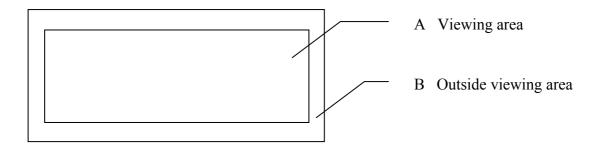

The quality assurance levels are shown below:

| Rank | Item Inspected | Defect type | AQL | Remark | |
|-----------------|--------------------------------|-------------------------------|--------|------------------------|--|
| | Non display | | | | |
| | | Over current | | Dismlary | |
| | Display | Missing segment | 0.65% | Display malfunction | |
| Critical defect | | Wrong viewing direction | | | |
| | | Backlight OFF | | | |
| | Dimension | PCB and bezel out of | 0.65% | Assembly | |
| | Difficusion | specification | 0.0376 | failure | |
| | Display | Incorrect operating | | | |
| Major defect | Backlight | Flashing, dust | 1.0% | | |
| | Dacklight | Wrong colour | | | |
| | | Black and white spot | | A | |
| | | Black and white lines | | | |
| | | Polariser scratch | | | |
| | LCD | Bubbles in polariser | | | |
| | | Segment deformation, pin hole | | | |
| | | Colour uniformity | | | |
| Minor defect | | Glass chip | 2.5% | Appearance defect | |
| | | Wire bond pad exposed | | defect | |
| | COB | Insufficient covering with | | | |
| | resin (wire bond line exposed) | | | | |
| | | Bubble, dust on COB | | | |
| | PCB | Dust, solder ball on PCB | | | |
| | rCD | Pad scratch | | | |
| | | Total | 2.5% | | |

| Page | 46 / 51 |

|------|---------|

8.2.2 Zone definition

8.2.3 Visual inspection

- Inspect under 2x20W or 40W fluorescent lamp (approximately 3000 lux) leaving 25 to 30 cm between the module and the lamp and 30 cm between the module and the eye (measuring position).
- Appearance is inspected at the best contrast voltage (best contrast is adjusted considering clearness and crosstalk on screen).
- Inspect the module at 45° right and left, top and bottom.
- Use the optimum viewing angle during the contrast inspection.

8.2.4 Standard of appearance inspection

9 RELIABILITY SPECIFICATION

| Test Item | Test Condition | Description |
|---|--|--|
| High Temperature Operation | 50°C or 70°C 200hrs | Endurance test applying the electric stress (Voltage & Current) and the thermal stress to the element for a long time. |
| Low Temperature Operation | 0°C or -20°C 200hrs | Endurance test applying the electric stress under low temperature for a long time. |
| High Temperature Storage | 70°C or 80°C 200hrs | Endurance test applying the high storage temperature for a long time. |
| Low Temperature Storage | -20°C or -30°C 200hrs | Endurance test applying the high storage temperature for a long time. |
| High Temperature & High Humidity Storage | 80°C,90%RH 96hrs | Endurance test applying the high temperature and high humidity storage for a long time. |
| Thermal Shock Test | 30°C 25°C 80°C 30min 5min 30min For 10 cycles | Endurance test applying the low and high temperature cycle. Burn In Test. |
| Vibration | 10~22Hz→1.5mmp-p 22~500Hz→1.5G Total 0.5hrs | Endurance test applying the vibration during transportation and using. |
| ESD | VS=800V,RS=1.5kΩ CS=100pF | Endurance test applying the electric stress to the terminal. |
| Shock Test | 50G Half sign wave 11 msec 3 times of each direction | Constructional and mechanical endurance test applying the shock during transportation. |

10 HANDLING PRECAUTIONS

Safety

If the LCD panel breaks, be careful not to get the liquid crystal fluid in your mouth or in your eyes. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and plenty of water.

Mounting and Design

Place a transparent plate (e.g. acrylic, polycarbonate or glass) on the display surface to protect the display from external pressure. Leave a small gap between the transparent plate and the display surface.

When assembling with a zebra connector, clean the surface of the pads with alcohol and keep the surrounding air very clean.

Design the system so that no input signal is given unless the power supply voltage is applied.

Caution during LCD cleaning

Lightly wipe the display surface with a soft cloth soaked with Isopropyl alcohol, Ethyl alcohol or Trichlorotriflorothane.

Do not wipe the display surface with dry or hard materials that will damage the polariser surface.

Do not use aromatic solvents (toluene and xylene), or ketonic solvents (ketone and acetone).

Caution against static charge

As the display uses C-MOS LSI drivers, connect any unused input terminal to VDD or VSS. Do not input any signals before power is turned on.

Also, ground your body, work/assembly table and assembly equipment to protect against static electricity.

Packaging

Displays use LCD elements, and must be treated as such. Avoid strong shock and drop from a height. To prevent displays from degradation, do not operate or store them exposed directly to sunshine or high temperature/humidity.

Caution during operation

It is indispensable to drive the display within the specified voltage limit since excessive voltage shortens its life. Direct current causes an electrochemical reaction with remarkable deterioration of the display quality. Give careful consideration to prevent direct current during ON/OFF timing and during operation.

Response time is extremely delayed at temperatures lower than the operating temperature range while, at high temperatures, displays become dark. However, this phenomenon is reversible and does not mean a malfunction or a display that has been permanently damaged.

If the display area is pushed on hard during operation, some graphics will be abnormally displayed but returns to a normal condition after turning off the display once.

Even a small amount of condensation on the contact pads (terminals) can cause an electro-chemical reaction which causes missing rows and columns. Give careful attention to avoid condensation.

Storage

Store the display in a dark place where the temperature is $25^{\circ}\text{C} \pm 10^{\circ}\text{C}$ and the humidity below 50%RH.

Store the display in a clean environment, free from dust, organic solvents and corrosive gases.

Do not crash, shake or jolt the display (including accessories).
